PROJECT PROFILE:

SILICA PLANT FOUNDATION

EXPERIENCE TALKS

A chemical manufacturer contracted with John Brown, Engineers & Constructors to provide the engineering and construction management for their new state of the art Silica facility. John Brown chose Raffin Construction as the contractor to place the 4000 plus yards of concrete required for the job.

SCOPE OF WORK

- large building footings
- heavy tank foundations and tank farms
- railroad scale & truck scale pits
- over 600 anchor bolts, as large as 2" in diameter, for the building and equipment foundations
- slab on grade
- elevated concrete slabs which included various parts of 6 floor elevations
- foundations for the bag house located adjacent to the Silica facility
