

## PROJECT PROFILE:

# SLITTER LINE FOUNDATIONS

---

Construction of equipment foundations for a 72 feet long, 80,000 lb. slitting line and a 26 feet deep looping pit within an existing manufacturing building, without shutting down the plant's manufacturing and distribution functions.

## PROJECT HIGHLIGHTS

- Provided a earth retention system and dewatering system for construction of the 26 feet deep looping pit
- Set embedded steel weldments for all slitter line equipment to very accurate vertical and horizontal tolerances
- Completed the project within a six week to eight week time frame

## PROJECT VALUE ENGINEERING

The original project costs exceeded the owner's budget. Raffin worked with the owner and the equipment supplier to lower the project costs within the owner's budget and still meet the project schedule.
