

PROJECT PROFILE:

EDUCATIONAL FACILITY

A 12,000 square foot educational programming space for a center which tutors inner city girls. The space consists of offices for the staff, traditional classrooms, a large open classroom, conference rooms, a computer room, an art center and a large recreational/dance room.

A CHALLENGE

The 12,000 SF of space encompassed three isolated areas of the building: the basement parking garage, the first floor of the north side of the building and the second floor of the south side of the building. Working with the architect, a plan was developed for a stairway hall which tied the three areas together in a central location. This allowed for the orderly flow of students and became a focal point of the space.

SETTING INDUSTRY STANDARDS

Working with the owner and architect in the early stages of projects, we are able to add value to the design process by helping solve problems in the most cost effective way within a project's design scheme.
